MONTHLY WEATHER MAP

METEOROLOGICAL SERVICE, DOMINION OF CANADA

MAY 1936

TEMPERATURE

Mean temperatures for May were above normal in the Yukon, in British Columbia and the central and southern portions of the Prairie Provinces, about the Lake of the Woods and in the major part of southern Ontario, along the upper and middle St. Lawrence River in Quebec and in Nova Scotia. Elsewhere throughout Canada and Newfoundland below normal mean temperatures were generally reported.

On Vancouver Island and in the lower Fraser River valley excesses of two to three degrees above normal temperature occurred. Along the coast of the mainland temperatures were normal to two degrees above normal while in the southern interior river valleys excesses of four to five degrees were reported.

In Alberta in the lower Peace and Athabaska River valleys the excess was four to seven degrees. In the North Saskatchewan River valley and throughout the district from Edmonton southward to Calgary as well as in the South Saskatchewan River valley there were excesses of six or seven degrees. The excess above normal was nine to eleven degrees in the district immediately north of the International Boundary and in the Alsask-Drumheller region.

In Saskatchewan excesses of six to nine degrees were reported in the North Saskatchewan River valley and in the agricultural district about Saskatoon. In the Empress-Biggar region and in the Cypress Hills and Wood Mountain district excesses of ten to twelve degrees were reported. Elsewhere throughout the agricultural district of southern and central Saskatchewan there were excesses of six to eight degrees.

New records for the absolutely highest temperature ever recorded in May were established at several stations in Alberta and Saskatchewan in the North Saskatchewan River valley and in the district to the south during the final week. Maximum temperatures in most cases were near the 100° mark while stations reporting 100° or over were Battleford, Consul, Leader, Maple Creek, Kindersley and Roadene.

In southern Manitoba mean temperatures were generally six to ten degrees above normal with the largest excesses occurring in the Red Deer River valley immediately north of the International Boundary. In the northern lake region reports indicate nearly normal temperatures.

In the Rainy River and Kenora districts of Ontario mean temperatures were normal to six degrees above normal. In Patricia, Cochrane, Timiskaming and Thunder Bay districts and the northern part of Algoma there were negative departures from normal of one to five degrees. Practically normal temperatures were reported in southern Algoma and Sudbury districts. Throughout southern Ontario there were excesses of two to six degrees generally, the exceptions being the valley of the Madawaska River where temperatures were normal or slightly below and along the upper St. Lawrence where there were excesses of one degree.

Temperatures were normal to two degrees above normal along the lower Ottawa and upper and middle St. Lawrence Rivers in Quebec. Along the lower St. Lawrence River, in the Gaspé Peninsula and along the north shore of the Gulf of St. Lawrence mean temperatures were normal to three degrees below normal. Mean temperatures were three to six degrees below normal in Lake St. John district and in the Laurentian Hills.

In New Brunswick mean temperatures were generally one or two degrees below normal except in the extreme southwest corner of the province where there were excesses of one degree. Throughout Nova Scotia temperatures were normal to three degrees above normal while there was a negative departure from normal of one degree on Prince Edward Island.

Reports indicate mean temperatures two to four degrees below normal in western Newfoundland and one degree below to one degree above normal along the eastern coast. There were deficiencies of five or six degrees along Hudson Strait and four to six degrees along the western coast of Hudson Bay.

PRECIPITATION

In southern British Columbia the precipitation averaged about 40% above normal from the Okanagan valley westward but was about 40% below normal in the Kootenay River valley. Severe flood damage was reported in the Fraser and Skeena River valleys due to the high temperatures of the final week of May.

In the Peace and Athabaska River valleys reports indicate nearly normal precipitation. There were deficiencies of 25% to 50% in the Rocky Mountain foothill region of Alberta and 35% to 70% in the Oldman and St. Mary River valleys. From Lethbridge eastward to the Alberta-Saskatchewan boundary the deficiency ranged from 15% to 35%. In the agricultural region about Edmonton and Wetaskiwin nearly twice the normal amount of precipitation occurred while in the Red Deer and Bow River valleys the excess ranged from 25% to 75% and was 50% generally.

Precipitation was considerably below normal in that region of Alberta and Saskatchewan between Vermilion, Medicine Hat and Melfort, Saskatoon and Shaunavon where the deficiency ranged from 10% to 60% and averaged about 50%. Along the International Boundary and in southeastern Saskatchewan there were deficiencies of about 35%. The region about Moose Jaw and northeastward towards Quill Lake and Lintlaw had excesses of about 60% on the average.

Throughout the agricultural region of southern Manitoba below normal precipitation occurred. The deficiency ranged from 20% to 70% and was about 40% on the average. In the northern lake region the deficiencies were generally of the order of 20% although a small excess occurred locally at Dauphin.

Precipitation was 10% to 75% below normal in Kenora and Rainy River districts. In Thunder Bay district precipitation was normal to 50% above normal except in the region about Lake Nipigon where there were small deficiencies. Excesses of 30% to 100% and 60% on the average occurred in Cochrane, Algoma, Sudbury and Timiskaming districts and on Manitoulin Island. Throughout southern Ontario precipitation was generally 30% to 75% below normal and 55% on the average, with the largest deficiencies occurring in the Lake Erie counties. The exception was in the lower Ottawa and the upper St. Lawrence valleys where the deficiency was only about 10%.

Along the lower Ottawa and the upper St. Lawrence Rivers in Quebec small deficiencies were reported. Excesses of 40% to 75% and 60% on the average occurred along the lower and middle St. Lawrence River and southward to the International Boundary.

In the Gaspé Peninsula and along the north shore of the Gulf of St. Lawrence excesses of 40% to 90% occurred. Precipitation was heavy in the Lake St. John district and in the upper St. Maurice River valley where the excess was practically 100%. The excess was about 75% in the Gatineau River valley and in the region of the headwaters of the Ottawa River.

Precipitation was for the most part decidedly above normal in New Brunswick. In the Restigouche and Nipisiquit River valleys and in the vicinity of the headwaters of the St. John River the excess was 90% to 150%. In the southern and eastern parts of the province excesses were of the order of 60%. In Nova Scotia along Chignecto Bay and the Basin of Minas and in the Annapolis valley there were excesses of 50% to 90% but along the Atlantic coast deficiencies of 10% to 60% occurred. On Cape Breton Island the excess was about 30% while on Prince Edward Island more than twice the normal amount of precipitation was reported.

In the western part of Newfoundland precipitation was quite heavy, reports indicating excesses of over 100%. In the southeastern section of the country smaller excesses of about 50% were reported.
